Federico Ratier

Engineering Manager • Tech & Product Lead • Solutions Architect

hello@federatier.com Stockholm, Sweden linkedin.com/in/federatier

Professional Summary

Experienced engineering manager and technical product lead.
I strive helping teams find their purpose, become owners of their solutions and deliver value to customers, internal and external. Both as product and at technical level. Growing people and give support to constantly challenge them into growing and help each other.
Silo breaker, in my teams we have always build for reusability, that way we can focus on what's important and have some extra time to experiment new approaches.
Interested in complex problems that require creative solutions, iterations and trying new things.
I have a strong background in software engineering, with over 10 years of experience in building scalable applications and leading cross-functional teams. I am passionate about mentoring engineers and fostering a culture of continuous improvement.

Selected work Experience

Scandinavian Airlines Senior Tech & Product lead 2022 - Present

- Interviewing and arranging of multiple teams with a mix of on site, near shore and off shore developers that allows us to deliver efficiently, with accountability and security.
- Developing and growing talent within our teams with performance plans, support on career path growth and increasing challenges that keep the developers engaged into improving and challenging our ways of working for everyones benefit.
- Planning and synchronizing deliveries between teams to make sure dependencies don't become blockers, risks are identified and documented.
- Coordination with multiple operational areas such us the control center, aircraft maintenance and airports. Constant identification of new opportunities
- Co-authored the first internal Engineering Handbook. This onboarding guide helps all developers to easily align and agree on the ways of working, api patterns, architecture and best practices
- Product owner of a team building core application that allows any other team in the company to build their own feature within. This has reduced delivery time of new digital solutions from 12~24 months to 3~5 months, since the development teams no longer need to set up their own testing suite, monitoring, CI setup, UI library or even authentication. The app uses centralized IAM through AD making easy and safe to manage accesses.

- Implemented different AI tools that allowed us improve the development of the interfaces using our own components library, and a MCP server to allow, privately and securely, analysis of the data for our operational stakeholders.
- Periodic on-site visits to the stations, testing new prototypes and integrations with IoT. Surveying and testing own prototypes. Testing apps with our real users
- Architect of wifi onboard our aircrafts. As we are heading to the adoption of Starlink in our aircrafts, we are also refreshing our offering while providing streaming content without saturating the downlink and in-seat ordering online and offline.

Klarna Engineering manager 2019 - 2022

- Led a team of up to 11 direct reports, ranging from recent graduates to senior developers and two Engineering Managers.
- My responsibilities included aligning business and technical needs. Work closely with the PO to continuously deliver new features without adding tech debt.
- Launched the program to several other countries quickly reaching 5 million users (from a projected 3 million) overshooting our target.
- Annual management of budget for infrastructure cost and development team cost. Including salary and performance review of the direct reports.
- Periodic 1-on-1, constantly following up and assisting in career growth and team health. Including other EMs.
- Technical and soft skills interviewer. Trainer for other interviewers joining the pipeline.
- Co-organized thekonferen.se (internal tech conference) and drafted the first toolkit to help streamline every years organization.
- Designed and executed the division of our team into two (and eventually three) problem spaces that allowed the developers to focus deeper on less things but still retaining the big picture.
- Architecture and development of the earn & burn system. Accruing points for paid purchases, and gift cards unlocking handling edge cases like refunds and fraud prevention.
- Implemented a wide variety of AWS products to ensure reliability, security, redundancy and also geographical distribution since the reward program runs in several countries around the globe.
- Member of the internal architecture group that would help and guide the teams with less expertise or that needed a second opinion on their decision.

Flybondi Senior full stack engineer 2019 - 2022

- Developer of the responsive IBE (Internet Booking Engine) flow for passengers.
- A/B testing of new features and developments with our passengers at different airports.
- Run the discovery and led the initial prototype of what would become later a flight scheduling tool that allowed to communicate with crew and passengers the status of each flight.

- Serverless infrastructure using AWS Lambda with Node.js, server side rendering with React, a GraphQL server with multiple systems integrations such as Radixx.
- Implementation of user state and data storage with buckets, and databases such as SQL databases and nosql like DynamoDB and Redis.

Other experiences

CTO & Co-Founder - Cinemad.Tv 2014 - 2017

Built from scratch an interactive video ads platform. Pitched for investment and secured funding. Interviewed, hired and managed a team of developers. Exited after being acquired by a digital marketing agency.

Fullstack developer - Buenos Aires city government 2009 - 2014

Fullstack developer - Grupo Extremo Sur 2005 - 2009

Education

Telecommunications Engineering 2006 - 2011

Universidad Argentina de la Empresa
